

Nano-Tex is aware of a study on the toxic effects of nanoparticles. We are also aware of additional scientific investigations into the means and effect of nanoparticle transfer and absorption.

These studies and their findings bear no relevance to the family of Nano-Tex products (Nano-Tex, Nano-Care, Nano-Pel, Nano-Dry, Nano-Touch). The polymers used in Nano-Tex treatments durably bind to the fabric's fibers through a patented attachment technology. Additionally, Nano-Tex treatments are designed to be non-bioabsorbant; the polymers used are too large to be absorbed into the skin or inhaled. Furthermore, Nano-Tex does NOT use nanotubes, buckyballs or any other nanomaterials that could be ingested or inhaled.

All Nano-Tex products comply with all known environmental and health and safety standards, worldwide.
